DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-7, drawn to a method and a device to identify data packets transferred between 2 sources, classifying the data transferred and accounting for the cost of those associated data packets, classified in class 705, subclass 400.
 - II. Claim 8, drawn to a system comprising of a host computer and a local programmable device for managing telecommunication devices connected by a network, classified in class 709, subclass 218.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I, and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I describes a method and a device to track data packets transferred between two sources, assigning the data packets to the user and calculate the cost for the user based on the amount of data transferred. Invention II discloses a system comprising of a host computer and a local programmable device for managing telecommunication devices connected by a network. See MPEP § 806.05(d).

Art Unit: 3639

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
